Contact: coregonid2023@inrae.fr,

Provisory time line

- First submission: during the symposium
- Submission deadline: November 24, 2023
- First round of review: December 2024
- First papers published: First trimester 2024

General:

Coregonines are cold-water fish that are distributed in the northern hemisphere (Holarctic). This taxonomic group has a high diversity (in terms of species and within species) and is a major resource for professional, recreational and subsistence fishing. Coregonines are sensitive to climate change (cold-water stenothermic species) and are subject to local forcing factors (eutrophication, exploitation by fishing, etc.).

The conference 'Biology and Management of Coregonid Fishes' has become an essential event for researchers and managers working on coregonines. We are pleased to announce that in 2024, *International Journal of Limnology* will publish a thematic collection of articles on coregonid fishes. This special issue will be composed of full length articles from a selection of communications (oral and poster) presented at the ISBMC 2023 ([15th International Symposium on the Biology and Management of Coregonid Fishes](#)) that will be held from 25 to 29 September 2023 in Evian-les-Bains, France. It will feature a selection of recent research outcomes related to the biology, ecology, genetics and management of coregonine fishes.

Topics:

1. Physiology, life history and behaviour
2. Population dynamics, habitat and trophic interactions
3. Diseases, parasites and ecotoxicology
4. Genetics and evolutionary ecology
5. Stock assessment, fishery management, conservation and aquaculture

Information about the submission and review process:

All manuscripts must be submitted online to <https://www.editorialmanager.com/limnol> by selecting the appropriate special issue in the "Section/category" scrolling menu. Submitted manuscripts will follow the same process as all other manuscript submitted to the journal, with no exceptions. The journal will apply a strict selection of the manuscripts. This means that manuscripts must be carefully written and strictly follow the [instructions given to authors](#). We encourage authors to read recent articles published in the journal (<https://www.limnology-journal.org/>) before submitting their manuscripts.
